

Allium™ Medical

The BIS - Biliary Stent

The Allium BIS

The BIS is used for managing chronic Common Bile Duct (CBD) obstructions to open occluded passages and allow intra-luminal flow during its long indwelling period. The stent has a large caliber, high radial force main body and is specially design to reduce the possibility of migration, reflux and development of reactive proliferative tissue at its ends. It's unique features enable the physician to easily and safely remove the stent whenever needed.

The BIS – Biliary Stent

Benefits

1. Unique Coating - fully covered by a polymeric coating designed to prevent tissue in-growth into the lumen as well as reduce encrustation, stone formation and calcification.
2. Reduced Migration - designed with an intra-duodenal anchor to decrease upward migration.
3. Easy and Safe Removal - stent is retrieved by unraveling it into a thread-like strip.
4. High Flexibility - extremely flexible to ensure minimal irritation and maximum patient comfort.
5. Easy Placement - radiopaque markers on the stent allow for insertion under vision and/or fluoroscopy for accurate positioning.
6. Long Term Indwelling - intended for a long indwelling period and can eliminate the need for recurrent procedures.

Allium's unique stent unraveling feature

Product Models

Delivery Systems

The stent is mounted on a 10Fr endoscopic (retrograde) or trans-hepatic (antegrade) delivery system.

Stent Sizes

Available with and without an anchor, in diameters of 8mm and 10mm and lengths of 60mm, 80mm, 100mm, 120mm

The New Generation of Allium's Family of Stents Includes:

RPS – Round Posterior Urethral Stent

TPS - Triangular Prostatic Stent

BUS - Bulbar Urethral Stent

URS - Ureteral Stent

The Company

Allium™ Medical is a manufacturer, developer and marketer of site-specific, fully covered stents for the urinary and biliary systems. A New Generation of Stents has been developed to address the unmet needs and common problems found in stents today.
